# Senior PHP Developer

**ABOUT THE PROJECT AND THE TEAM:**

Why joining our game production studio in Romania? Because we are a great team, with a vision of growth and always aiming for the top.
We develop engaging, fun and challenging games. We are part of an international group having the same focus on playing, developing and creating fantastic products for our customers all over the world.

We are looking for a **Senior PHP developer** to join our talented Server team based in Bucharest.

**Role Overview:**
Create the back-end part of new and existing games for mobile platforms
Work closely with team members by supporting them on the back-end side (code reviews, peer programming, agile development)
Solve issues with an entrepreneurship mentality
Create application architecture (design patterns, RESTful APIs, modular code, micro services)
Research new technologies to improve application performance
Overview application KPI
Collaborate with product managers to provide technical feasibility, specifications and estimates for project level work, understanding all technical components of their product area at

**Your responsibilities:**
Write code to create new features and support existing software
Write automated tests (unit tests or functional tests) to test integration, performance, security, etc.
Spot application technical debts and create tasks to solve them
Design the application architecture and participate in new feature technical analysis
Estimate resources vs deadlines for new features and for updates

**Required skills:**
5+ years of experience in back-end programming
Deep knowledge in PHP and MySQL (MariaDB)
Top skills in and any related PHP frameworks, preferably Symfony (Laravel, Zend, CodeIgniter are accepted).
Experience working with parallel processing
Experience working with Rabbit / Redis systems
Experience working with APIs and RESTful Architecture
See the big picture when it comes to development and able to code defensively, without breaking other pieces of functionalities
Knowledge in Design Patterns, Algorithms and Data Structures
Ability to work and communicate well in a multi-discipline team environment
Autonomous and proactive attitude
Ability to create and implement the database architecture
Excellent written and verbal communication skills
Fluent written and spoken English
Solid understanding of High Availability, Load Balancing, Performance tuning
Agile development is a plus

**Location** now: very close to downtown; soon to move at **Grovazesti**

Fabrika HR will answer all your questions and hope to see you soon for our technical screening!
