

Job Description – Software Developer

About the team and project

We are an incubator for positive impact through design and development headquartered in Orlando, Florida and with the software development hub in Romania.

We research, design, and build for real people, helping our clients build meaningful relationships with their audience. We have 7+ years of experience in developing web and mobile applications, and building B2B and B2C solutions.

Our team has built technology used by major brands and events including Target, Walgreens, FIS, Super Bowl, and Cannes Lions.

What you will be doing:

Using technology, you'll help brands to take a more socially responsible stance towards their business strategy and engage their customers to do the same in the process.

We're a ruby on rails workshop running in the cloud.

Our technology stack is:

- Ruby on Rails for web and apis;
- Bootstrap/StimulusJS/TurboLinks on the front end;
- PostgreSQL as the main persistence layer, accompanied by Redis and ElasticSearch;
- We're running in AWS using Kubernetes, and we embrace the configuration as a code principle;

So you'll have devops and/or SRE career development opportunities

- We heavily rely on automated testing and we have the tooling in place for code/coding conventions audits. We're focusing on automation, quality and standards.

What we are looking for:

- 3+ years of experience with Ruby on Rails or a similar framework (Django, Laravel, etc.) Good understanding of HTML/CSS/JS;
- DevOps, AWS and kubernetes experience it's a plus;
- Excellent verbal and written English communication skills;
- Love to write code and take full ownership of a product or feature from concept to launch;
- Have confidence making architectural design decisions that improve scalability & performance;
- Familiarity with Agile processes, SCRUM it's a plus;
- Comfortable with automated testing.

What you will get:

- Flexible work hours;
- Be part of a small team and the chance to make a mark on the business and product development;
- Work in a distributed environment;
- Build technology that has a social impact in underrepresented /impoverished communities.
