

Java Developer - Job Description

ABOUT THE CLIENT & PROJECT:

- We are actually making the world a safer place.

We are a global provider of **security and intelligence data mining software** that helps governments, critical infrastructure providers and enterprises to **neutralize and prevent terror, crime and cyber threats**. Today, over 10.000 organizations in more than 180 countries (companies and government agencies worldwide) use our solutions to power their cyber intelligence operations.

We have 6 R&D centers worldwide and we are focused on in-house development of cyber intelligence solutions and just established a new R&D center in Bucharest with a focus on end-to-end intelligence projects delivery.

We are looking for a **Java/J2EE Developer** on server side to join our Java Team that develops and offers support for our products and contributes to our major projects designed to keep the world safe.

RESPONSIBILITIES:

- Developing Java/JEE on server side
- Work as part of a team using the latest technologies: SOAP/REST, TCP HTTP protocols, Kafka, Elastic Search, multithreading
- Implementation of new product features, improving existing product features
- Adding performance and software quality metrics to our codebase

REQUIREMENTS:

- Over 2 years of experience in Java/J2EE development server side;
- BSc, Software Engineering or other related degree;
- Familiar with standard concepts, practices and procedures within software design and development;
- Experience with SOAP/REST & TCP HTTP protocols;
- Experience with application servers, Hibernate and Open sources tools - an advantage;
- Scripting skills (Maven/ANT/Shell/JavaScript) - an advantage;
- Experience with Kafka & Big Data technologies - an advantage.

Location: good location, center of Bucharest
