

Job Description – Front-end Developer

ABOUT THE PROJECT AND THE TEAM:

We are developing our own product – an Omni-channel retailing system for both in-store and online businesses.

Our team is based in Dublin and Romania (mainly Craiova) and we all work **remotely**.

We are looking for a Front-end Developer to join our team.

The ideal candidate will have excellent programming skills with a focus on quality, performance, extensibility and maintainability of code within an agile software development environment. This is an opportunity to learn from more experienced, talented technologists as well as gain experience in taking an idea **from an initial concept to releasing a new product to market**.

RESPONSIBILITIES:

- Developing the UX/UI on a range of project types, from research/discovery, design and build;
- Expertise in User Experience design and prototyping;
- UI architecture experience;
- Delivering new products to market from concept to launch.

REQUIREMENTS:

- Relevant experience in UI front end development;
- Thorough understanding of web markups like HTML & CSS (firm understanding of elements interaction and positioning, as well as UX concepts);
- In-depth knowledge in a Javascript based framework (Angular is preferred);
- Good command of the TypeScript language;
- Hands-on experience in executing Angular applications, XHRs creation, dependency injections, directives, controllers, services;
- Prior experience in user's action validation, server-side rendering, sockets handling and much more;
- Proficiency in AJAX and JS DOM manipulation techniques;
- Experience in RESTful services and the ability to coordinate with backend developers;
- Strong expertise in writing cross-browser compatible code;
- Adjacent technologies like Node for a run-time environment and Webpack for a modular bundle.
