

Job Description – DevOps Engineer

ABOUT THE PROJECT AND THE TEAM:

We are developing our own product – an Omni-channel retailing system for both in-store and online businesses.

Our team is based in Dublin and Romania (mainly Craiova) and we all work **remotely**.

We are looking for a DevOps Engineer to join our growing team.

The successful candidate will participate in the development and maintenance of the group's CI / CD solution, allowing delivery teams to autonomously build and deploy in-house and third-party developed applications and services.

This is an opportunity to learn from more experienced, talented technologists as well as gain experience in taking an idea from an initial concept to releasing a new product to market.

RESPONSIBILITIES:

- Architect and manage Cloud environments;
- Develop and implement monitoring policies;
- Deployment and release management;
- Enable rapid development through strong ongoing integration and deployment;
- Script / Automate central processes to improve the efficiency and availability of the platform;
- Guarantee the maximum availability of the platform and its main services;
- Build CI/CD pipelines and taking a lead role in automating processes.

REQUIREMENTS:

- Strong hand on experience with Azure and AWS Cloud Services and Engineering;
- Strong background in Windows/Linux/Unix Administration;
- Experience with automation/configuration management using either Ansible, Terraform, CloudFormation;
- Practical knowledge of code and scripts (Python, Node.js / Javascript, Powershell, Bash);
- Good experience in Kubernetes, Docker etc.;
- Experience in developing and maintaining CI/CD process using tools like Maven, Jenkins, Octopus etc.;
- Working in regulation with industry standard best practices in close coordination with application team;
- Utilise Agile Development, SCRUM, Kanban.
