

Job Description – QA Automation Engineer

ABOUT THE PROJECT AND THE TEAM:

We are developing our own product – an Omni-channel retailing system for both in-store and online businesses.

Our team is based in Dublin and Romania (mainly Craiova) and we all work remotely.

We are looking for a **QA Automation Engineer** to join our team.

The ideal candidate will have excellent programming skills with a focus on quality, performance, extensibility and maintainability of code within an agile software development environment.

WHAT IS EXPECTED OF YOU:

- You will be working on latest technologies;
- Your Job will involve elaborating requirements together with stakeholders;
- Work across our agile scrum teams and contribute to sprint planning by working with Manual QA and the Product Owner to agree test automation priorities, estimates and deliver fully tested scripts within agreed timelines;
- Sign off on regression on each release;
- Ensure that the tests are reliable and the team have visibility of test results;
- Contribute to the QA Automation quality bar by defining and refining a set of coding standards and automation processes in line with future team expansion plans.

WHAT YOU NEED:

- 2+ years related experience in QA with a minimum of 3 years as an Automation Test Engineer using automated tools and frameworks such as: Selenium, JavaScript / TypeScript, Webdriver.io, or similar;
- Jr-Mid-level coding skills using JavaScript / TypeScript;
- A proven track record of delivering UI test automation for web, API and distributed systems;
- Automating UI and API tests for environments being built using the following technologies: Angular, .NET, SQL Server;
- Performance and load testing experience a plus including JMeter etc.
- A proven track record of delivery in an Agile environment.
- Experience with test management, bug tracking and agile tools e.g. Jira, Confluence or other similar.
