

PHP (Fullstack) Developer

About the project:

Our engine scans the web content in real-time, performing an instant data filtering.

The clients can assure that they have in place a filter that helps them impose the web policies with the same high level of accuracy as always.

Through an user-friendly interface that does not require advanced technical expertise to handle, they have the ability to set policies that manage the filtering and reporting functions, controlling the web content accessed by the network users, issuing access, block or coach policies.

Required Skills and Technologies:

- 4+ years of PHP experience
- Expertise in AngularJS
- Understanding of MVVM frameworks
- Understanding of MVC frameworks
- LAMP Stack, jQuery, CSS, HTML
- SQL (Postgres, MySQL)
- GIT
- The ability to work on LAMP development environment
- Familiarity with XML and JSON
- Understanding of caching mechanisms such as Memcache/Redis
- Great attention to detail and be highly organized
- The ability to articulate yourself professionally
- Excellent written and spoken English
- The ability to adapt in a diverse and multicultural environment

Your duties and tasks:

- Work daily in PHP, PostgreSQL, JavaScript, AngularJS
- Maintain, optimize and develop new features for our products
- Resolve cross-browser compatibility issues
- Write clean structured and well-documented code
- Work with LAMP development environment and version control GIT
- Creating and managing API integrations

Location: Banu Manta, 2 min by feet to Subway station
