

Job Description – PHP Developer

ABOUT THE PROJECT AND THE TEAM:

Our platform offers integrated payment solutions for small and mid-sized companies, eliminating a big % of manual processes for bookkeepers.

We are developing it with: **PHP (Laravel)**, **PostgreSQL**, and operating on **AWS cloud infrastructure**.

Description: The Senior Developers role is to **develop, test, maintain, and implement our ongoing development expansion in support of the achievement of business and growth requirements**. This includes **writing, coding, testing, implementing, and analyzing software programs and applications**.

Requirements:

- Excellent understanding of coding methods and best practices;
- Flexible and adaptable in regards to learning and understanding new technologies;
- Ability to conduct research into software-related issues and products;
- Proven analytical and problem-solving abilities;
- Ability to work both independently and in a team-oriented, collaborative environment;
- Suggest improvements, security needs, best practices, etc (your voice will be heard).

Responsibilities:

- Collaborate with the team in conceptualizing and developing software;
- Analyze and assess existing business systems and procedures;
- Conduct research on emerging application development software products, languages, and standards in support of procurement and development efforts;
- Recommend, schedule, and perform software improvements and upgrades;
- Consistently write, translate, and code software programs and applications according to specifications;
- Design, run and monitor software performance tests on new and existing programs for the purposes of correcting errors, isolating areas for improvement, and general debugging;
- Administer critical analysis of test results and deliver solutions to problem areas.
