

ABOUT THE CLIENT & PROJECT:

We are a team passionate about technology, code and testing, learning and willing to improve every day. We recently started a project for one of the largest non-chain photo and video equipment store in the United States and we are now building a team of QA Engineers with the primary focus on developing and testing a robust and easy to maintain application.

Each of us works on different layers of the infrastructure. Therefore, a commitment to collaborative problem solving, sophisticated design, and quality product is important. The code is written in NodeJs and ReactJS and it needs to be tested. We do only automated testing and we need a **Team Lead** to help us with the end-to-end automated process and/or with the Unit Testing.

RESPONSIBILITIES:

- Run Unit tests everytime the software is built (additionalt write/learn to write Unit Tests)
- Using Nightwatch, Chai and Mocha - as our back-end is written in NodeJs and front-end in ReactJs
- Create Test Cases for automation scripts
- Actively involved in Test Plan development, automation documentation and process improvement
- Doing end-to-end testing

REQUIREMENTS:

- Experience with Unit Testing
- Good knowledge of requirements and test management tools
- Writing clear, reusable test scenarios
- Knack for writing clear, reusable test scenarios
- Familiarity with object-oriented programming
- Experience in end-to end testing with automation tools (Selenium, JMeter, NeoLoad, etc)
