

## Front-end Developer

---

### About the project:

We are a growing team based in Bucharest, looking for frontend developers to further strengthen our development teams

You will be working in a tightly built system, and even though it is on the frontend side, **the focus is more on structured programming than on design**. We are always looking to make our development process more effective and the next step is to look even more into automation.

We are dedicated to value driven development, think lean software development is a great way of achieving that and we use Scrum to support our efforts along the road.

We release twice a week and the team truly owns HOW it should develop our client going forward. The team also have a say in WHAT we will develop.

### Required Skills and Technologies:

- Have worked in a team for at least 3-5 years developing, deploying and maintaining one or more software products in production for an extended period of time;
- Have strong knowledge of JavaScript, CSS, HTML5;
- Have experience with ReactJS (**or other SPA solid ground**) and **curious about new technologies in general**;
- Be familiar with SASS or LESS pre-processors;
- Have demonstrated that you have the mindset and skills to become an effective part of a cross-function, self-organizing, self-managing team;
- Be technically brilliant (or getting there);
- Have both theoretical and practical knowledge of agile and/or lean software development;
- Demonstrate excellent speaking and writing English skills.

### Your tasks:

- Build scalable and maintainable systems that run and fail gracefully;
- Write testable software in collaboration with our testers;
- Create automated tests in collaboration with our testers;
- Support our Product Owners with technical insight;
- Apply their technical skills and curiosity to the product development process;
- Constantly polish our development process;
- Continuous integration;
- Love releasing software.

### A sneak view of our tech stack:

- |                    |                                     |
|--------------------|-------------------------------------|
| • Javascript (ES6) | RequireJS                           |
| • React            | Backbone.js – actually replacing it |
| • Sass             | Node.js – not so much now           |
| • Handlebars       | Gulp                                |
| • Babel            | Jasmine                             |
| • BEM              | Responsive web                      |
